

Introducing Griswold Controls' Reclaimed Water Irrigation Valves

Griswold Controls' DW Series and 2000 Series true reclaimed water valves are now available with the industry standard purple handle. Most foreign elements found in reclaimed or pumped water, such as dirt, algae, and other organic and inorganic materials will pass through these valves without any problem and will not accumulate. These industrial strength valves are ideal for reliable, trouble-free performance in commercial dirty water applications.

- Ideal for use with reclaimed or dirty water—resists most water borne contaminants
- Purple flow control handles available on DW-PRV, DW-PVS, and 2000 reclaimed model—R series
- Pressure regulating—ensures constant, smooth downstream pressure
- Slow closing—eliminates water hammer or chattering, stress to pipes and sprinkler heads, and subsequent system damage
- Long lasting brass body—no plastic components used

To order: Add "R" to the end of standard model number for reclaimed model with purple handle.
