

GRISWOLD CONTROLS®

A FlowCon International/Griswold Controls LLC. Company

Griswold Controls pioneered automatic flow limit control with the introduction of its stainless steel flow cartridge in 1960. Over fifty years later, our innovation, quality and reliability continue to set us apart from the competition as we now offer a lead free version of our most popular valves: K Valve, 2-Way Unimizer® and QuickDisc®.

Griswold Controls' lead free* brass K Valve, 2-Way Unimizer® and QuickDisc® meets the requirements of California's AB1953 legislation, Vermont's S152 and 193 legislation, MD HB372, LA HB471 and Federal Public Law 111-380, as well as exceed the current requirements in the other states. It is also ANSI/NSF-61 Annex G compliant. Our 3rd party certification for CA AB1953 and NSF-61 Annex G was performed by Truesdail Labs.

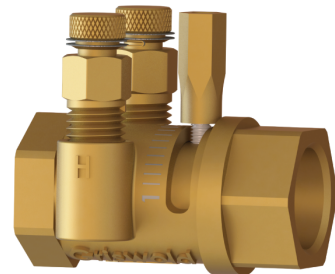

*Contains less than 0.25% lead content by weight on wetted surfaces.

2-Way Unimizer®
(Actuated Valve)

K Valve
(Automatic Flow Limiting Valve)

QuickDisc®
(Manual Balance Valve)

Absolute Control. Optimized Efficiency.
